

360° EAM

Life Cycle Costing

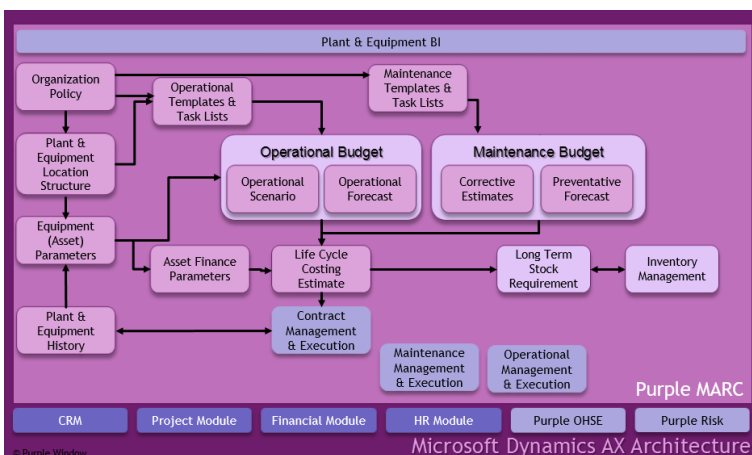

360° Asset Visibility

Budget and actually manage complete lifecycle costs of all assets.

Key features include:

- Unlimited what-if scenarios
- Ability to forecast all operational, contract and maintenance life cycle elements.
- Ability to forecast all planned and unplanned maintenance inclusive of corrective, preventive, predictive, safety, and route inspections.
- Graphical display of planned operations, contracts and maintenance events
- Future visibility of spares, consumables, internal and external resource requirements.
- Forecast according to various operational and maintenance calendars and non-work periods
- Forecast events according to planned utilisation of assets
- Forecasting scenarios set up for specific forecasting requirements in terms of asset type, owner, location, etc.
- For assets on contract, future payment plans can be generated and actual payment be managed.
- For operational and maintenance future events can be forecasted and actual occurrence be managed.
- Developed within the Microsoft Dynamics D365FO platform, validated and deployed in Microsoft AppSource
- Natively integrated with D365FO ERP

360° Life Cycle Costing

Complete visibility on all asset management levels.

Key benefits include:

- 360° view for an integrated total life cycle approach
- Long term asset revenue, cost and replacement visibility.
- Long term visibility and justification of all resource requirements
- Integrated day-to-day budget vs actual revenue and cost management.
- Reduced service cost through better planning
- Increased useful life of assets
- Real time service data visibility
- Increased visibility through What-if simulations
- Improved asset state and useful condition management.

Better visibility through integrated planning and control

Effective forecasting of operations, maintenance and contract allocation for improved budgeting, monitoring and life cycle control.
