# 360° Fleet
Asset and Equipment Register

Single-point visibility

One central asset register for instant visibility

Key features include:

- Manage all fleet assets (vehicles, trucks, etc.) in one or multiple companies across multiple geographies.
- Easy navigation to any asset by group, location, status or owner.
- Graphical asset hierarchical view
- Tracking status of assets in terms of maintenance serviceability and operational availability
- Notifications and scheduled reports for reported failures, maintenance due and incidents reported.
- Comprehensive history of related failures, incidents, maintenance and operations
- Management of safety equipment inspections
- Control all contractual, safety and maintenance documentation.
- Monitoring of asset lifecycle costs and revenues.
- Web based, mobile and cloud access
- Comprehensive asset or equipment management reports

Asset and Equipment Register

Instant visibility and springboard for all functions from maintenance to contract allocation

Key Benefits include:

- Save time by managing several assets at the same time
- Instant visibility of all assets through hierarchical views and associated information including history
- Save costs by using one solution for all asset types and industries such as mining, fleet, facilities and manufacturing
- Manage more effectively by real time monitoring of revenue and cost
- Better utilisation of company resources
- Complete life cycle cost management

Single-point visibility

One central point to manage, operate, control and optimise the entire fleet
